The Guide to June

Welcome to Versity! I am **June**, your automated WhatsApp assistant. My goal is to get you the exact study materials, PYQs, syllabuses, and books you need for your MAKAUT semesters as quickly as possible.
Currently, I operate using **buttons, lists, and specific text commands**. I don't have Natural Language Processing (NLP) yet, which means I can't understand conversational sentences. To get the best out of me, please use the commands outlined in this guide!

Getting Started

The easiest way to interact with me is by using the interactive buttons and menus I send you. When you start a session, I will guide you step-by-step:

1. Choose a **Category** (Syllabus, PYQs, Books, or Study Materials).
2. Choose your **Subject**.
3. Choose the specific **Year/Unit/Type**.
4. I will instantly send the PDF directly to your WhatsApp!

Note: If you briefly see a .bin file, just give it a few seconds. WhatsApp will automatically convert it into a readable PDF once the download finishes.

Master Command List (The "Words")

If you ever get lost, want to restart, or need to access a specific feature, type and send one of these exact words:

- **hi**, **hello**, or **main**
  - **Action:** Resets your current session and brings you straight back to the Main Menu. Use this if you are stuck or want to search for a new subject.
- **backlog** or **backlogs**
  - **Action:** Enters **Backlog Mode**. If you need to access materials from a previous semester, use this command. I will ask you which previous semester you want to browse, and all subsequent searches will pull from that specific semester. *(To exit Backlog Mode, just send main).*
- **guide** or **words**
  - **Action:** Sends this exact PDF guide to you so you can reference the commands.

- **update**
  - **Action:** Provides the direct link to your Versity dashboard where you can update your current semester, branch, or personal details.

- **help**
  - **Action:** Brings up the quick help menu with options to view the guide or contact support.

- **contact**
  - **Action:** Gives you the direct link to reach out to the developer for support or bug reports.

- **contribute**
  - **Action:** Want to help add missing files? This command provides the link to the open-source Versitylab GitHub repository where you can contribute materials.

Troubleshooting & Tips

"I sent a message, but June replied saying she doesn't understand."
Remember, June cannot process complex sentences or media. If you send a voice note, sticker, image, or a sentence like *"Can you please send me the math notes?"*, it won't understand. Stick to clicking the menu buttons or using the exact commands listed above.

"The subject or file I need isn't showing up."
The website is getting constantly updated alongside the database. If a subject or specific file is missing for your current semester, it means it has not been acquired yet. You can help out by using the contribute command to submit materials!

"I need materials for a completely different branch."
Right now, the responses are tailored exactly to the Branch and Semester you entered when you completed your Versity profile. If you changed branches or need to update your semester, use the update command.
